

MANUEL RODRIGUEZ

SENIOR FRONTEND /FULL-STACK ENGINEER

Senior Frontend / Full-Stack Engineer with 9+ years of experience building modern web applications using React, Next.js, and TypeScript. Strong proficiency in TypeScript and modern JavaScript (ES6+), with practical expertise in HTML and CSS for building responsive and mobile-first user interfaces. Recently focused on platform for monitoring and configuring network infrastructure, integrating frontend systems with Java Spring Boot microservices and event-driven backends. Experienced designing real-time UI features, topology visualization tools, and scalable frontend architectures for distributed systems.

SKILLS

- React, Next.js, Angular, TypeScript, Redux Toolkit, Redux-Saga, TanStack Query, PrimeReact, Material UI, React Bootstrap, Tailwindcss
- Webpack, Babel, module bundling, modern build systems
- Java, Spring Boot, JPA, Hibernate, REST APIs, gRPC, Netconf
- MicroK8s, Docker, Helm, Azure
- GitLab CI/CD
- Prometheus, Grafana, Loki
- Kafka Event-driven architecture, microservices,

LANGUAGES

- Spanish (Fluent)

REFERENCE

Lucas Lawrence

Snapchat / Senior Software Engineer
Phone: 661-993-7289

EDUCATION

B.S Electrical and Computer Engineering
California State University Northridge

WORK EXPERIENCE

Canoga Perkins

Frontend Software Engineer

2022 - 2026

- Proposed and led the adoption of Next.js when the team transitioned from Angular to React, establishing a standardized project structure and development conventions for a 5-engineer frontend team.
- Developed reusable UI components using PrimeReact and Material UI, styled with Tailwind CSS, to support configuration screens, tables, and form workflows, improving UI consistency and accelerating frontend development.
- Built and maintained React/Next.js applications using modern build systems and module bundling, ensuring efficient development workflows and optimized frontend performance.
- Identified duplicated API-fetching logic across multiple modules and introduced TanStack Query to standardize caching, loading states, and error handling, simplifying asynchronous state management across the application.
- Implemented real-time UI synchronization by integrating Kafka service events with Redux-Saga middleware, enabling topology views, configuration screens, and data tables to automatically update as backend device state changes.
- Developed an interactive network topology visualization using React Force Graph to display connectivity between switches and services, supporting graphs of approximately 50-100 network devices.
- Extended existing Java Spring Boot microservices to detect device state changes and emit Kafka events consumed by the frontend, enabling event-driven updates across the platform.
- Implemented centralized API exception handling using Spring ControllerAdvice, standardizing error responses across services and improving reliability of frontend integrations.
- Debugged and deployed application fixes in Azure-hosted environments, supporting production stability for a network management platform running on containerized microservices.

J.D Power

Frontend Software Engineer

2015 - 2022

- Developed and maintained an internal analytics platform used by business analysts to explore and report on consumer data, building UI components for data tables, filtering, and reporting workflows.
- Contributed to the migration of a legacy AngularJS application to modern Angular, helping modernize the codebase and improve long-term maintainability of the platform.
- Developed backend services using Java and Spring Boot to support REST APIs and persist application data using JPA/Hibernate with an Oracle database.
- Built a Spring Boot service to collect and analyze IP address metadata during user authentication, enabling reporting to identify potential credential sharing or suspicious access patterns.
- Developed custom MicroStrategy plugins and authentication components to extend the analytics platform and integrate with backend services.
